Paper Title: SECURING STATE REVENUE THROUGH BLOCKCHAIN: THE MEDIATING ROLE OF PERCEIVED TRUST IN TELECOMMUNICATIONS IT GOVERNANCE

Research:

The paper discusses applying blockchain technology in the telecommunication sector in Indonesia, concerned mainly with studying the factors that influence technology acceptance and how they may differ in developing countries as compared to research studying well developed countries. This done through performing a questionnaire on a sample of 146 workers with variant ages, experience and education level; the authors' approach and analysis is analogous to their second reference, 2023, about supply chains (<https://doi.org/10.1177/21582440231217854>) and this reference, 2022, strangely not cited although about Indonesia (<https://www.researchgate.net/publication/359945936> The Intention to Use Blockchain in Indonesia Using Extended Approach Technology Acceptance Model TAM)

Final Decision: *MAJOR Revision or a RESUBMIT*
(if this is not the final version and some error has happened).

Main Comments:

Detailed comments are embedded in red color in a pdf manuscript file; however, main issues are:

- Many *abbreviations* (highlighted in the main text) are *not defined* before use.
- The *literature review is missing*; maybe the authors mistakenly submitted an older version, or it got omitted somehow, because this is accompanied by some added references not cited in the main text (like the one about the Serbian case). Also, their cited reference (Ullah 2022) contains a table summarizing a predated review (2022) that they could add on. Still, even if an extra part is added with all uncited references, the literature review should include research discussing the Indonesian case like the one mentioned above (there is a lot more).
- *The paper roadmap (chapters organization) is also missing. If some error has happened and this is not the final version or some kind of virus has scrambled a copy-paste while changing format, please correct the situation and send the version that contains all the missing parts.*
- Since at least 3 cited references used *Unified Theory of Acceptance and Use of Technology (UTAUT)* as opposed to *Technology Acceptance Model (TAM)* used in this paper (and another uncited 2022 paper about Indonesia), I expected some discussion on the argument behind that and its reflection on the results.
- *Too many references from Journal of Economic Criminology* and money laundry although *not cited in the main text*, as if they were mistakenly copied from another paper. Some references miss the DOI or a valid link although existing and easy to find (available open access). The paper is not even concerned with the sanctions system, attitudes related to PT towards its fairness, for those references to seem relevant.
- *PU5 should be about ease of use (PEU) not usefulness.*

- I believe the data of the questionnaire should be submitted as a supplementary file; we do not know to what extent the ratios in the sample reflect the real ratios of workers in that sector in Indonesia (for example the education level); how 5000 samples were taken when there are 146 participants; the colors in the map (figure 3) yellow, orange, green what do they mean?
